NetMotion Mobility®

Mobility is a software-only Mobile VPN that provides secure, continuous remote access to network applications from mobile devices. Using Mobility, an officer can roam among any number of available IP-based networks without dropping the connection, crashing applications, or losing data.

Rugged Laptop

A military-tested rugged laptop is designed to meet and exceed military rugged requirements (MIL-STD810F) for shock, vibration, and temperature protection. It provides real-time access to GIS systems and helps reduce response times.

Multi-Band Antenna

Designed for connected vehicle applications, a low-profile multi-band antenna works in cellular, GPS, Wi-Fi, and LTE modes.

Skyus-X

The Skyus-X is a high-speed embedded communications gateway with full support for 3G and 4G LTE. The Skyus-X consolidates all network connectivity into a single platform by integrating LTE, a GPS receiver, firewall, high-speed processor, and Wi-Fi access point all in one device. The Skyus-X's I/O ports monitor engagement of lights, sirens, and other inputs. GPS allows dispatchers to track the location of emergency crews.

Mounting System

A docking station provides port replication eliminating the need to connect external peripherals to the computer. An articulating arm provides tilt, swivel, pull-out and 360° rotation of equipment.
