

Features:

- Compatible with Skyus 3G & 4G modems
- Runs as a service - UI Optional
- Lockable user configuration
- Supports Windows XP/7/Embedded

Connection Watchdog

Internet of Things solutions provide access to a wealth of information. In every IoT deployment one thing is always the same: the most critical piece of information to managing mobile assets is device health and connection status. The Inseego Skyus Watcher is a connection watchdog utility specifically designed to monitor and manage your Skyus deployment.

Peace of Mind

Skyus Watcher is designed to run on Windows platforms, providing robust connection monitoring and failure recovery logic, ensuring reliable connectivity for Inseego Skyus customers. In the event connectivity is lost Skyus Watcher takes action and resets the modem. Designed to operate unattended, the Skyus Watcher utility logs and alerts users to issues after their resolution.

Customize Your Deployment

Skyus Watcher is highly configurable, allowing connection and signal strength threshold configuration on a micro level unique to a device, region or solution. Skyus Watcher allows configuration of minimum RSSI, Ping Interval, Ping URL's, and Ping Retry Interval.
